ACADEMIC & PERSONAL PROJECTS

Flash Cards, Udacity   **9/9/18**
Front End Developer (Academic Project)
- Mobile application that allows users to study collections of flashcards. The app allows users to create different categories of flashcards called "decks", add flashcards to those decks, take quizzes on those decks, and create a profile.
- Responsibilities: Front-end software development
- Technologies Used: React, Redux, React Native, JavaScript, HTML5, CSS3.
- GitHub Repo: https://github.com/sagenate24/Flash-Cards
- App Store: https://itunes.apple.com/us/app/flashcards-study-more/id1436666696?ls=1&mt=8
- Google Play: https://play.google.com/store/apps/details?id=org.nathansage.flashcards

Would You Rather, Udacity   **7/26/18**
Front End Developer (Academic Project)
- An app built with React and Redux similar to the "Would You Rather" game. A User will be able to answer questions, create questions, see what questions they haven't answered, see how other users have voted, and to see the ranking of users on a leaderboard.
- Responsibilities: Front-end software development
- Technologies Used: React, Redux, JavaScript, Babel, HTML5, CSS3, AWS S3.
- GitHub Repo: https://github.com/sagenate24/Would-You-Rather
- Finished project: http://wouldyourathergame.s3-website.us-east-2.amazonaws.com/#/

My Reads, Udacity   **6/20/18**
Front End Developer (Academic Project)

- App that allows you to keep track of books you have read, books you are reading, books you want to read, search for new books, and to categorize new or existing books to a shelf of your choice.
- Responsibilities: Front-end software development
- Technologies Used: React, JavaScript, Babel, HTML5, CSS3, Udacity's custom API, AWS S3.
- GitHub Repo: https://github.com/sagenate24/My-Reads-Project
- Finished project: http://www.myreadswebsite.com1.s3-us-west-2.amazonaws.com/index.html#/

Jamming Web Application, CodeCademy 5/8/18
Front End Development (Academic Project)
- Front end web application connected to Spotify's web API to create new playlists by searching and adding songs retrieved from Spotify's API to a custom playlist feature that allows you to later save them directly to your Spotify account.
- Responsibilities: Front-end software development, create authorization for client side.
- Technologies Used: React, JavaScript, Babel, Webpack, HTML5, CSS3, Spotify Web API.
- GitHub Repo: https://github.com/sagenate24/React-web-apps/tree/master/jammingnew
- Finished project: http://jamming.nathansageprojects.com.s3-website.us-east-2.amazonaws.com/#/
-
- http://jammingwebapp.s3.us-east-2.amazonaws.com/#/

Devour, CodeCademy 4/28/18
Front End Development (Academic Project)
- Yelp clone that lets you search for restaurants and other businesses as well as the cities they are in. Search results come back with names, pictures, reviews, stars, respective price, and description of the business.
- Responsibilities: Front-end software development, create authorization for client side.
- Technologies Used: React, JavaScript, Babel, Webpack, HTML5, CSS3, Yelp Web API.
- GitHub Repo: https://github.com/sagenate24/React-web-apps/tree/master/ravenous
- Finished project: http://devour.nathansageprojects.com.s3-website.us-east-2.amazonaws.com/

Counter-Top Mobile App 2/27/18
Front End Development (Personal Project)
- Front end mobile app that works for both Android and iOS operating systems. Shows four screens of countertop edges, surface materials, tub and shower surrounds, and a home screen.
- Responsibilities: Front-end software development.
- Technologies Used: React Native, JavaScript, Babel, HTML5, CSS3, Expo.
- GitHub Repo: https://github.com/sagenate24/Android-App

EDUCATION

Udacity - React Nanodegree Program, September 2018

CodeCademy - Build Front End Web Applications from Scratch, May 2018

South Puget Sound Community College, Olympia, WA - Associates Degree, In Progress
